THE AI SOFTWARE FACTORY

From hypothesis to shipped product. Every time.

Gulanga's AI software factory: a delivery operating system that turns ideas into shipped products, fast and to a repeatable standard, with AI agents working alongside your people under set guardrails.

Project overview: the HASTE workflow, hypotheses, decisions and risks in one view

THE PROBLEM

Docs in one place, decisions in another, priorities in a spreadsheet. No single source of truth.

WHAT IT TAKES

A repeatable process that connects hypothesis to outcome, with accountability at every stage.

THE PATHFINDER WAY

Process, workspace and AI agents in one native experience, built for how product team's work.

The HASTE process

FIVE STAGES • CLEAR GATES

H

Hypothesise

Frame the belief worth testing and capture findings.

A

Assess

Users, jobs-to-be-done, decisions and risks.

S

Specify

Features, scope, tech spec and working design.

T

Throughput

Cycles and tasks shared by people and agents.

E

Evaluate

Measure outcomes, approve the gate, learn.

Built for how teams actually ship.

01

HASTE process

Five stages with conditional gates, concept briefs and PRDs, risk and decision tracking, and learning loops.

STAGE GATES • PRDS • LEARNING LOOPS

02

Project workspace

Concepts, hypotheses, decisions, risks, features and brand, all connected to your delivery stages.

UNIFIED VIEW • JTBD & PERSONAS

03

AI agents

From observe-only to full autonomy, with guardrails, approval workflows and budget limits. Every action audited.

APPROVALS • BUDGETS • AUDIT TRAIL

04

Feature Mapper

Organise features into modules and groups, score them with PVE and trace each one back to the job it serves.

PVE SCORING • JTBD TRACEABILITY

05

Work Board

Sprint planning, task assignment and milestones, with human-readable IDs and relations. Agents work the same board.

SPRINTS • AGENT TASK QUEUE

06

Brand System

Capture brand profiles, generate briefs and extract design tokens, so identity is defined and development ready.

DESIGN TOKENS • TONE OF VOICE

AI AGENTS • FOUR AUTONOMY LEVELS

Speed, without giving up control.

1 Observe

Watches and reports.
Takes no action.

2 Execute with approval

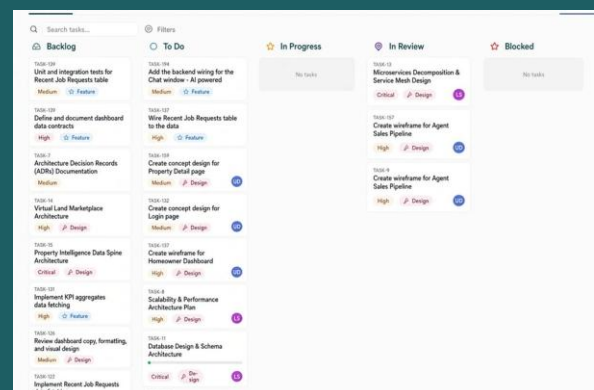

Proposes actions; a human approves.

3 Guardrails

Acts on its own within the limits you set.

4 Full autonomy

Works end to end, with every action audited.

Agents pick up work from the same board as your team.

Token & action budgets • Quality gates • Audit trail

PART OF GULANGA.AI

The factory at the heart of a sovereign, Indigenous-led AI ecosystem. Scoutable, Consent.ID and Relate are built and delivered through Pathfinder.
